Features

Grote LED 4" dome WhiteLight™ interior light with a range of fitting options including grommet, flange and hard wire as detailed in the product number table. This interior light comes with a clear polycarbonate lens and integrated flange for simple and easy installation and can be fitted to trucks and trailers.

The use of LED technology ensures that the amount of wasted energy is considerably lowered compared to that of a traditional bulb interior light. The surface is safe to touch as there is no expendable heat. This interior light is 2 times brighter than other lamps on the market today as it uses WhiteLight™ brightness and uses 70% less power than incandescent options.
